#### Loan-Backed Securities

(1) Carrying value for structured securities have been determined in accordance with the guidelines provided by the NAIC. Fair value is determined using a pricing hierarchy starting with a widely accepted pricing vendor, followed by external broker/dealers, Bloomberg, analytic modeling and benchmark to index model. Our asset manager uses a proprietary model for loss assumptions and widely accepted models for prepayments assumptions in valuing mortgage-back and asset-backed securities with inputs from major third party data providers. It combines the effects of interest rates, volatility, and prepayment speed based on Monte Carlo simulation with credit loss analysis and resulting effective analytics (spreads, duration, convexity) and cash-flows are reported to clients on monthly basis. Model assumptions are specific to asset class and collateral types and are regularly evaluated and adjusted where appropriate.
