

Building Evacuation Safety

There are many reasons a building may need to be evacuated. Fire is the most common cause for evacuation, but evacuation may be needed if a chemical is released, after a storm, or as a result of a bomb threat. Employees should be notified in an expedient manner when an emergency occurs. Review the following building evacuation safety tips with employees.

Tool Box Tips

- All employees need to know where to meet, outside of the building, when an evacuation occurs. (assembly area)
- Employees should know two ways out of their work area.
- Employees should assist disabled employees and visitors during an evacuation.
- The evacuation plan should be practiced through drills on a regular basis—minimally twice a year.
- Emergency exits must remain clear and unblocked at all times.
- Never lock or block a fire exit.
- Emergency exits should be clearly marked and inspected regularly.
- Do not run and leave the area quickly.
- After exiting the building, do not re-enter.
- The chain of command remains the same as company operations—supervisors, managers will perform a head count.
